

Thanks for stopping by my site about my favorite subject Search Engine Optimization
- a source of FREE CUSTOMERS from the Internet.

- Get New Customers to Your Website EVERY DAY
- Get MORE SALES From The People Who Visit Your Site
- SAVE MONEY On The Marketing Account

Sound too good to be true?

It's NOT. You truly can get a lot of extra customers directly from Google if you are not already doing SEO on your website.

The trick is to get your website a front seat on Google when people search for what you sell. When your website is among the first 10 results shown on the first page on a Google search you will get some customers. But when you get up to no. 1 - 3 you really start to feel the \$love\$ from Google. Most people will browse between the first couple of results (you and your competitors)

The customer will then choose:

- the nicest user friendly site
- the site with best products/prices
- the site with best sales copy/presentation

Feel free to write me an email and i'll see how i can help you get more customers.

Do you own a BAD website?

The problem with a bad website that does not live up to Google's standards is that it does not show well on Google's Search Engine when people search for what you have

Let's Check Your site RIGHT NOW - Skype me!

You Want a Piece of Google!

You really want a piece of this because **everybody use Google**. For instance if you live in London and is a carpenter - it would be sweet to be no.1 on Google when people wrote "Carpenters London" or similar right? This is what happens when we do SEO or Search Engine Optimization. We make the website show to all these new potential customers - no need to buy adds - Google will bring you the customers to your website.

But that's not it!

When the people finally get to your website you really want to look your best - and you want to have some brilliant sales copy that will just catch the customer's attention and make them buy. If yo lack this piece you will first lead the customers to the website via the SEO - then you'll scare them away with bad copy. I will make sure the people will stay with you on your website and by the end we're done with them - more of them will buy your product/service.

The wrong Michael Brix?

Try and read just a little more and i'll bet that you or somebody you know could use what you are about to read:

Im NOT Self-Centered!

The reason why this frontpage has my name written all over it is simply because of Google. This is one of many small things that need be done to make me no. 1 on Google when people look for "Michael Brix" - and this again ;O) is probably the reason you're reading this right now. AM I RIGHT?

Your Best Weapon on The Internet!

Yes search engine optimization is really your best weapon to pick up your customers on the Internet. I know... yes yes, the site needs to be cool, but that is really my second concern when operating a website. I want to get right up there in Google's sweet spot as no. 1 - or 2 or 3 if the competition is tuff.

There's really nothing to argue - if you you're not friends with Google you have no customers from the wonder of Internet.

Does YOUR website Communicate?

Many website are very beautiful. Some of the most beautiful websites on the internet just don't communicate with customers - they are shows. Of course big companies like Nike and many others succeed in making very cool flash website that communicate pretty well.

If you spend money on adds in newspapers or on other websites read this!

Have you ever really thought tactics? Think about how these adds work. Every day, week or month they just suck your \$\$\$ out of your hands, and off course they bring you customers. The paper off course tell you how many newspapers they sell, but remember that just some of them have interest in what you sell (unless you sell internet porn) ;O) People will see your add only once - if you don't have the add in the paper next time where the same customer actually needs what you have the money was just wasted on the first add. BUT what happens when we make some SEO? - let's see. 1st. Our add (our website) will be visible to targeted customers who are actually searching for what we have on Google. 2nd. our money spent will last for a long time into the future - possibly years or until competition buys SEO on their website.

Money well spent on newspaper adds or...?

You WANT to be the BRIGHTEST BULB on the tree!

A website is much like a real shop even though many people mistakenly underestimate their site. When you think about it it's very crazy, but it's a fact, that most companies gladly invest thousands and thousands of dollars on adds in magazines and newspapers. They might even spend a big buck on a banner on another website on the internet because this website always comes up when they sometimes make a random Google search. But why not use this money on a very cool and modern website that has been SEO'd the heck out of - maybe even some profesional sales text to increase sales now you have the customers inside your shop - no matter if you have a product online or any service and product outside cyberspace. PROFESIONAL SALES TEXT WILL INCREASE SALES! It just will. There are so many factors that make a great sales text great. It's VERY advanced and it will take you some time to master it, if you want to try yourself - but off course possible. I myself have not had somebody else write on my site, since i just like to write this myself.
